Your Crew Writes The Outreach. You Press Send.

30 ready to paste prompts for cold email agencies selling to small local businesses.

Paste a block into ChatGPT or Claude, replace everything inside [BRACKETS], run it.

Every prompt below was written to be used as is. Nothing here invents a result, a testimonial, or a number you do not have.

SECTION A. COLD EMAIL COPY

A1. First touch opener

```
You are writing the first cold email in a sequence sent by [AGENCY NAME], a cold email agency that runs outreach for s

The prospect: [BUSINESS NAME], a [BUSINESS TYPE] in [CITY]. Owner or manager is likely [OWNER NAME OR "unknown"]. What

Write one email, 90 words maximum, plain text, no images, no attachments.

Rules:
- Subject line under 6 words, lowercase, no exclamation marks.
- Open with the observation, not with who we are.
- One clear ask at the end, and make it small (a yes or no question, not a 30 minute call).
- No compliments, no "I hope this finds you well", no "I came across your website".
- Do not claim any result we have not had. Do not invent numbers, clients, or case studies.
- Write at a 6th grade reading level.

Give me:
1. The subject line
2. The email body
3. One sentence on why this angle fits this specific business
```

Use when: you are starting a new prospect and want the first touch to sound like a human noticed something, not like a template.

You get back: a subject line, a body under 90 words, and one line of reasoning you can check before sending.

A2. Follow-up 2

```
Continue the cold email sequence. This is follow-up 2, sent [3] days after the first email.

My first email to [BUSINESS NAME] said: [PASTE FIRST EMAIL]
They have not replied.

Write follow-up 2, 60 words maximum, plain text.

Rules:
- Do not repeat the first email. Assume they read it and ignored it.
- Do not say "just following up", "bumping this", or "circling back".
- Add one new piece of information or one new angle. The new angle is: [NEW ANGLE, for example "a competitor of theirs
- Same ask as before, worded differently and smaller.
- No guilt, no "did you see my last email".
- Subject line: reply to the same thread if your tool supports it, otherwise 4 words or fewer.

Give me the subject line and the body, then one line listing what I need to confirm is true before sending.
```

Use when: the first email has been ignored and you need a second touch that is not a nag.

You get back: a 60 word follow-up with a genuinely new angle plus a fact-check line.

A3. Follow-up 3

```
Write follow-up 3 in a cold email sequence, sent [7] days after the first email.

Context: [BUSINESS NAME], a [BUSINESS TYPE] in [CITY]. First email: [PASTE]. Follow-up 2: [PASTE]. No reply to either.

Write follow-up 3, 45 words maximum.

Rules:
- This email must be useful even if they never reply. Lead with something they can act on without us: [USEFUL THING, f
- Give that thing in the email body, not behind a link.
- After the useful part, one line asking if they want the full version. That is the only ask.
- No pressure, no deadline you cannot back up.
- Plain text, no formatting.

Give me the subject line, the body, and one line telling me what I must verify about the useful thing before this send
```

Use when: touch three, and you want to earn the reply instead of chasing it.

You get back: a 45 word email that gives away something real and asks for one small yes.

A4. Break-up email

```
Write the final email in a cold email sequence. This is the break-up, sent [10] days after the first email. Two or thr

Prospect: [BUSINESS NAME], a [BUSINESS TYPE] in [CITY].

Write it in 50 words maximum.

Rules:
- State plainly that I will stop emailing them.
- Leave one door open: a single line saying what to reply if they ever want [OUTCOME THEY WANT, in their words].
- No passive aggression. No "I guess you are not interested". No fake scarcity.
- Do not ask a question that requires them to answer. This email should be closeable.
- Plain text, no signature block beyond my name and the agency name.

Give me the subject line (4 words or fewer) and the body.
```

Use when: the sequence has run its course and you want the list clean without burning the prospect.

You get back: a short closing email that ends the thread politely and preserves the door.

A5. Subject line generator

```
Generate subject lines for a cold email to [BUSINESS TYPE] owners in [CITY].

The email body is about: [ONE SENTENCE ON WHAT THE EMAIL SAYS]

Rules:
- Produce 15 subject lines.
- 5 under 4 words, 5 between 4 and 6 words, 5 written as if replying to something they already said.
- Lowercase. No exclamation marks. No emoji. No "free", no "guarantee", no "act now", no money symbols, no ALL CAPS.
- Nothing that could be read as a promise of results.
- For each subject line, one label: which of these it is testing, CURIOSITY, SPECIFICITY, or FAMILIARITY.

Then tell me which three you would send first in a live test, and why in one line each.
```

Use when: your current subject line is tired and you want a single testable set rather than 40 random options.

You get back: 15 subject lines labelled by the lever each one pulls, plus a starting three.

A6. Objection reply: "we already have an agency"

```
A prospect replied to my cold email with: "We already have an agency doing this."

Context: [AGENCY NAME], cold email agency for small local businesses. Prospect is [BUSINESS NAME], a [BUSINESS TYPE]. W

Write a reply, 80 words maximum.
```

```
Rules:
- Agree with them. Do not imply their agency is bad.
- Do not attack the competitor or imply they are being ripped off.
- Ask two specific questions that a happy client would be able to answer in one line each, about how the current setup
- Offer something small and concrete with no commitment: [SMALL OFFER, for example "I will send you the benchmark shee
- No pitch. No "when your contract ends". No mention of price.
- Plain text.

Give me the reply and one line on the risk that this reply could read as a sales tactic.
```

Use when: a prospect pushes back with an existing provider and you want to stay in the conversation without arguing.

You get back: an 80 word reply that asks two diagnostic questions, plus an honesty check on tone.

A7. Objection reply: "not interested"

```
A prospect replied: "Not interested, thanks."

Context: [BUSINESS NAME], [BUSINESS TYPE], [CITY]. My original email was about [WHAT IT WAS ABOUT]. They replied withi

Write a reply that does two things in this order: accepts the no without arguing, then asks one question that is genui

Rules:
- 45 words maximum.
- No "no problem at all". No re-pitching. No "just so you know". No mention of results.
- The question must be about their situation, not about us. Example shape: "Out of interest, is it that [GUESS AT REAL
- Give them an easy exit in the last line.
- Plain text, no bullet points.

Give me the reply, plus one line noting whether the question I supplied is a real guess or a fake one, and why that ma
```

Use when: a prospect says no early and you want the reason, not the sale.

You get back: a 45 word reply that closes politely and may surface the real objection.

A8. Referral ask

```
Write a referral request email to send to a current client, [CLIENT NAME] at [BUSINESS NAME].

What we do for them: [ONE HONEST SENTENCE, no results claimed unless you have the figure]
How long they have been a client: [DURATION]
What went well from their side, in their words if I have it: [QUOTE OR "unknown"]

Rules:
- 90 words maximum.
- Make the ask specific: who exactly would be a good fit, described by type and size, not "anyone you know".
- Make it easy to say no.
- Offer to write the introduction myself so they do not have to compose anything.
- Do not offer a reward unless I tell you what it is. Leave a [REWARD] slot if you think a reward helps, and say wheth
- No flattery. No "it has been a pleasure". Plain text.

Give me the subject line, the body, and one line on whether [REWARD] should be filled in at all.
```

Use when: you want referrals from happy clients without making it awkward.

You get back: a specific referral ask with an easy exit, plus a judgement call on incentivising it.

A9. Re-engagement email for a dead thread

```
A thread went dead. Last message from me was [DAYS] weeks ago about [TOPIC]. They replied once, then stopped.

Prospect: [BUSINESS NAME], [BUSINESS TYPE]. Last thing they said: [PASTE OR "nothing, they never replied"]

Write a re-engagement email, 70 words maximum.

Rules:
- Do not pretend the thread is alive. Name the gap honestly in one short line.
- Lead with what has changed since, on our side or theirs: [WHAT CHANGED]
```

```
- If nothing has changed, say so and lead with a new piece of information instead.
- One ask, small, and different from the last ask.
- No apology paragraph. One clause is enough.
- No "per my last email". Plain text.

Give me the subject line and the body, plus one line naming what the reader would have to believe for this to land.
```

Use when: a conversation went quiet weeks ago and you want to reopen it without pretending nothing happened.

You get back: a 70 word re-engagement email and the belief it depends on.

A10. A/B variant generator

```
I have a cold email that works reasonably well. I want to test it properly.

Here is the email: [PASTE FULL EMAIL]
Here is the current subject line: [PASTE]
What I think the weakest part is: [YOUR GUESS OR "not sure"]

Produce three variants. Each variant may change exactly ONE thing from the original:

Variant 1 changes the HOOK, meaning the first two lines only.
Variant 2 changes the OFFER, meaning what I ask them to do.
Variant 3 changes the PROOF, meaning what backs up the claim.

Rules:
- Everything else stays word for word identical, including length and sign off.
- Label each variant with the one lever it isolates.
- Do not add proof we do not have. If the original has no proof, variant 3 must use a placeholder [PROOF WE ACTUALLY HA
- Tell me what a win in each variant would actually teach me, and what it would not.

Keep all three under the same word count as the original.
```

Use when: one email is performing and you want to learn something from the next test instead of guessing.

You get back: three single lever variants, each labelled, plus what each result would and would not tell you.

SECTION B. DELIVERABILITY AND INFRASTRUCTURE

B1. SPF, DKIM and DMARC audit

```
Act as a deliverability engineer. I need to audit the email authentication for a sending domain before we run cold out

Domain: [DOMAIN]
Sending platform: [Google Workspace / Smartlead / Instantly / other]
Where DNS is managed: [REGISTRAR OR DNS HOST]

Walk me through a complete audit in this order:
1. SPF: what record should exist for this setup, the exact lookup count risk, and what a broken SPF looks like in a he
2. DKIM: which selector to check first for this provider, and how to confirm the key is signing outbound mail.
3. DMARC: what policy to start with given we are cold emailing, what to set for rua and ruf, and why p=reject too earl
4. Alignment: how to tell whether SPF or DKIM is the one passing alignment, and why that matters for our setup.
5. The exact commands or free tools to run each check, by name.

Output as a checklist with a PASS condition next to each item, so I can hand it to whoever manages DNS.
Do not tell me a record is correct without giving me the way to verify it.
```

Use when: a new sending domain is about to go live and you cannot afford to guess at authentication.

You get back: a five part audit checklist with named tools and a pass condition per item.

B2. Domain warm-up plan

```
Build a domain warm-up plan for a cold email operation.
```

```
Domains: [NUMBER] domains, [AGE OF THE OLDEST], sending from [Google Workspace / Microsoft 365] mailboxes
Target: [TARGET PER MAILBOX PER DAY] once warm
Tool in use: [Smartlead / Instantly / other]
Timeline I want: [NUMBER] weeks if realistic

Give me:
1. A day by day ramp table for the first 14 days, then weekly after that. Columns: day, sends per mailbox, number of ma
2. The rule for when to hold and repeat a day instead of increasing.
3. What content to send during warm-up and what to avoid, being specific about the difference between warm-up traffic a
4. The three signals that mean stop and restart, not continue.
5. Where a paid warm-up tool like Mailreach fits, and where it does not replace actual sent volume.

Be explicit that warm-up timing depends on the reputation the domain starts with, and tell me how to check that startin
```

Use when: new mailboxes are being brought online and nobody has written down the ramp.

You get back: a 14 day ramp table, the hold rule, the stop signals, and where a warm-up tool fits.

B3. Inbox to inbox test triage

```
I ran an inbox to inbox test and I need to read the result properly.

Setup: sent from [SENDING ADDRESS] to [RECIPIENT PROVIDER, for example Gmail, Outlook, Yahoo, a corporate domain]
Result: [WHERE IT LANDED, for example inbox, promotions, spam, missing]
Subject line used: [PASTE]
Body used: [PASTE OR "same as production"]
Authentication status: [SPF/DKIM/DMARC RESULT OR "unknown"]

Tell me:
1. The most likely causes, ranked, for this specific provider and this specific result.
2. Which causes are content, which are infrastructure, and which are reputation, and how to tell them apart with one me
3. The single next test to run, with the exact wording to send so the variable is isolated.
4. What result would rule out a content problem entirely.

Do not give me a generic deliverability checklist. Work from the result I gave you.
```

Use when: a test email did not land in the inbox and you need the cause, not a list of possibilities.

You get back: ranked causes tied to the provider, one isolating next test, and the result that clears content.

B4. Spam folder diagnosis

```
Emails from my domain are landing in spam. Diagnose it with me.

Domain: [DOMAIN]. Sending platform: [PLATFORM]. Volume: [VOLUME PER DAY].
How long this has been happening: [TIME]. What changed just before it started: [CHANGE OR "nothing we know of"]
What the spam placement looks like: [ALL RECIPIENTS / ONLY GMAIL / ONLY OUTLOOK / ONLY NEW DOMAINS]
Content of a typical email: [PASTE ONE]

Structure your answer as:
1. First, the checks that rule out an authentication failure, in the order to run them.
2. Second, the checks that rule out a reputation problem, including how to read the postmaster tools for Google and Mi
3. Third, the content and link pattern causes, with what specifically to look at in the email I pasted.
4. Fourth, what to change today versus what takes weeks to recover.
5. A short list of what NOT to do, and why each one makes it worse.

Be honest about which causes can be fixed and which only recover with time and volume.
```

Use when: placement has dropped and you need a diagnosis order that does not waste a week.

You get back: a four stage diagnosis, a split between fixes and time, and a do-not list.

B5. Bounce classification

```
I have a bounce report and I need it classified into actions.

Here is the raw bounce data: [PASTE BOUNCES OR DESCRIBE THE REPORT FROM YOUR TOOL]
For each bounce, classify as one of:
```

```
- Hard: the address does not exist and never will
- Soft: temporary, retry later
- Block: the receiving server refused us, this is a reputation or policy issue
- Content: the message itself was rejected
- Unknown: not enough information in the bounce

Then tell me:
1. Which addresses to remove permanently and which to leave alone.
2. What a rising block rate versus a rising hard bounce rate each tells me about the campaign.
3. The threshold at which I should pause the campaign and what to check first.
4. What to do about catch-all domains that accept then drop.

Give me a table plus a short set of rules I can apply to future reports without asking again.
```

Use when: a bounce report comes back and you need to know what to do with each address today.

You get back: a classified table, removal rules, and the thresholds that should pause a campaign.

B6. List cleaning rules

```
Write me a list cleaning rule set for a cold email operation.

List source: [WHERE THE LIST CAME FROM, for example a scraped directory, a purchased list, a manual build]
Size: [NUMBER]. Market: [COUNTRY / REGION]. Business type: [TYPE]
Verification tool we have: [TOOL OR "none"]
Sending tool: [Smartlead / Instantly / other]

Give me:
1. The cleaning steps in order, from raw list to sendable, with what each step removes and roughly how much it should
2. The verification result categories to keep, to drop, and to quarantine, and what to do with unknowns and catch-alls
3. Rules for duplicate detection across domains, not just addresses.
4. The rule for role based addresses such as info@ and sales@ in this market, and why local businesses are different f
5. What legal basis we should be able to point to for this list in [COUNTRY], in plain terms, and where to get the act

Be specific that I still have to confirm the legal position myself.
```

Use when: a raw list is about to become a campaign and nobody has written down the cleaning bar.

You get back: an ordered cleaning process, keep and drop categories, and the legal question to confirm externally.

B7. Sending volume ramp

```
Plan the volume ramp for an outreach campaign across multiple mailboxes.

Mailboxes configured: [NUMBER]. Provider: [Google Workspace / Microsoft 365 / mixed]. Domains: [NUMBER]
Current daily volume: [NUMBER]. Target weekly volume: [NUMBER]. Campaign length: [WEEKS]
Tool: [Smartlead / Instantly / other]

Give me:
1. A per mailbox daily limit that is safe for the provider, with the reason for the number.
2. A weekly ramp schedule to target, with the increase rule and the trigger to hold.
3. How to split volume across mailboxes and domains so no single mailbox carries the load.
4. What to monitor daily versus weekly, by metric and by tool.
5. The point at which adding mailboxes stops helping and something else becomes the limit.

Flag any number in your plan that is an estimate rather than a provider stated limit.
```

Use when: volume is about to scale and you want the ramp written down before it breaks.

You get back: a per mailbox limit, a weekly schedule, and every estimate clearly flagged.

B8. Secondary domain setup

```
I want to protect my main domain by sending cold outreach from secondary domains.

Main domain: [MAIN DOMAIN]. Business site lives there: [YES / NO].
Secondary domains I own or plan to buy: [LIST OR "to be chosen"]
Provider: [Google Workspace / Microsoft 365]. Tool: [PLATFORM]
```

```
Walk me through:
1. How to choose secondary domains that will not look like a throwaway to spam filters or to the recipient.
2. The full setup, in order: purchase, DNS, authentication, mailboxes, first sends.
3. What the secondary domain needs to look like so a recipient who checks finds a real business. Be concrete about the
4. How to keep the main domain out of the blast radius, including what must never be sent from it.
5. The naming pattern that lets me run several secondary domains without them reading as a network.

Give it to me as an ordered checklist with the owner of each step named as me or my DNS person.
```

Use when: adding sending domains so the main business domain is never at risk.

You get back: an ordered setup checklist and the minimum a secondary domain needs to look real.

B9. Reputation triage after a spam complaint

```
We received a spam complaint. Triage it.

Where the complaint came from: [Google postmaster / Microsoft SNDS / the tool / a client telling us]
Rate if known: [RATE OR "unknown"]
Which mailbox, domain and campaign: [DETAILS]
What the recipient did: [COMPLAINED, MARKED SPAM, UNSUBSCRIBED, OR "unknown"]

Give me, in this order:
1. The immediate actions in the next hour, ranked, including whether to pause the campaign and which part of it.
2. How to find the address or addresses involved and what to do with them.
3. What this complaint does and does not tell us about the list quality, being honest that one complaint is not a tren
4. The monitoring to put in place for the next 14 days, with the threshold that means stop.
5. What to tell the client, in three sentences, without overstating what happened or hiding it.

Do not reassure me. Tell me what is actually known and what is not.
```

Use when: a complaint lands and the first hour decides whether it becomes a real reputation problem.

You get back: hour one actions, a 14 day monitoring plan, and three honest sentences for the client.

B10. Pre-launch checklist generator

```
Build the pre-launch checklist for a cold email campaign. Nothing sends until every item is ticked.

Campaign: [CAMPAIGN NAME]. Client: [CLIENT NAME OR "our own"]. Market: [COUNTRY]. List size: [NUMBER].
Mailboxes: [NUMBER] on [PROVIDER]. Tool: [Smartlead / Instantly / other]
Verification tool: [TOOL OR "none"]

Produce a checklist in these groups, with each item written as a yes or no question that someone can actually answer:
1. Infrastructure and authentication
2. Domain and mailbox readiness, including warm-up status
3. List quality and legal basis
4. Copy and offer, including the unsubscribe path and what happens on a reply
5. Tracking and measurement, including what we will record in GA4 or the CRM
6. Rollback, meaning the exact steps to stop everything if it goes wrong

For each group, mark which items are blocking and which are warnings. End with the three items most often skipped, and
```

Use when: a campaign is days from launch and you want a gate instead of a vibe.

You get back: a six group yes or no checklist with blockers marked and the three most skipped items.

SECTION C. CLIENT REPORTING AND RETENTION

C1. Monthly report narrative

```
Write the monthly report narrative for a cold email client.

Client: [CLIENT NAME], a [BUSINESS TYPE] in [CITY]. Month: [MONTH].
Numbers for the month: [PASTE THE REAL NUMBERS, for example sends, delivered, opens, replies, positive replies, meetin
```

```
Previous month for comparison: [PASTE OR "first month"]
What we changed this month: [CHANGES]
What the client asked about last month: [THEIR QUESTION]

Write:
1. A three sentence summary at the top, leading with what mattered, not with the biggest number.
2. Then four short sections: what we did, what happened, what it means, what is next.
3. One paragraph naming what did not work, without softening it.
4. Any place where the data is incomplete or ambiguous, said plainly.

Rules:
- Use only the numbers I gave you. Do not estimate or fill gaps. Where a number is missing, write "not measured this m
- No adjectives that overstate. No "incredible", no "massive".
- Plain English. If a term needs explaining, explain it in six words or fewer.
```

Use when: the monthly report is due and you need it to read like a person wrote it and meant it.

You get back: a summary, four sections, an honest miss paragraph, and explicit gaps.

C2. Quarterly business review agenda

```
Build the agenda for a quarterly review with a cold email client.

Client: [CLIENT NAME], [BUSINESS TYPE]. Quarter: [QUARTER]. Contract value: [AMOUNT OR "do not discuss"]
What happened this quarter: [SUMMARY OF REAL NUMBERS AND EVENTS]
What they care about most, in their words: [QUOTE OR BEST GUESS]
Renewal date: [DATE OR "not set"]

Give me:
1. A timed agenda for a 45 minute call, with the minutes allotted to each item.
2. The three questions I should ask rather than present, and why each one matters.
3. The section where I raise [THE DIFFICULT THING], with wording that is direct and not defensive.
4. What to bring as pre read, one page maximum, and what to leave out.
5. How to close with a clear next decision, not a vague agreement to keep talking.

Keep it usable on the call. No theory.
```

Use when: a quarterly review is coming and you want it to end in a decision rather than a slideshow.

You get back: a timed agenda, three questions to ask, wording for the hard part, and a closing move.

C3. Churn risk signal read

```
Read these signals and tell me how much churn risk this account is carrying.

Client: [CLIENT NAME]. Months with us: [NUMBER]. Contract: [MONTHLY / RETAINER / OTHER]
Signals I have noticed: [LIST THE ACTUAL SIGNALS, for example slower replies, missed calls, a new marketing hire, a qu
Last time they gave feedback: [WHEN AND WHAT]
Any commercial change on their side: [CHANGE OR "unknown"]

Give me:
1. Each signal, what it usually means, and what else it could mean. Be explicit that these are patterns, not proof.
2. An overall read: low, moderate, or high risk, with the two signals driving it.
3. The one conversation to have this week, with the opening line written out.
4. What not to say, and why.
5. What I would need to see from them to move this to low risk.

Do not tell me to "add value". Give me actions that can be done by Friday.
```

Use when: an account feels like it is drifting and you want to act before the notice arrives.

You get back: signals read with alternatives, a risk level, and a conversation to have this week.

C4. Upsell conversation

```
Plan an upsell conversation with an existing cold email client.

Client: [CLIENT NAME], [BUSINESS TYPE]. What they buy now: [CURRENT SERVICE AND PRICE]
```

```
What they would be buying: [NEW SERVICE AND PRICE]
Evidence this is the right next step for them: [WHAT YOU ACTUALLY KNOW, for example reply rates that suggest they need
Their budget signals: [WHAT YOU KNOW OR "unknown"]

Give me:
1. The case in three sentences that starts from their problem, not from our new service.
2. The two objections most likely in this specific conversation, with a reply to each.
3. How to handle "not right now" without discounting.
4. The exact ask, said in one line, with the price stated plainly.
5. What to do if they say yes, in the first 24 hours.

Do not write anything that implies guaranteed results from the upgrade.
```

Use when: a client is ready for the next step and you want the conversation planned, not improvised.

You get back: a three sentence case, two objection replies, the exact ask, and post yes steps.

C5. Testimonial ask

```
Write the ask for a testimonial from a client.

Client: [CLIENT NAME], [BUSINESS TYPE]. Client for: [DURATION].
What we actually did for them: [HONEST LIST]
Results we can prove: [NUMBERS OR "we do not have clean numbers"]
Where the testimonial will be used: [WEBSITE / PROPOSAL / ADS]

Give me:
1. The request email, 80 words, that makes it easy to say yes and easy to say no.
2. Four specific questions to prompt a useful testimonial, which produce detail rather than praise.
3. A one line instruction on what I will and will not edit, so the quote stays theirs.
4. The consent line, covering name, business name, and where it will appear.
5. What to do if they only give a vague one, without pushing them into something untrue.

Do not draft a testimonial for them to approve. That would make it ours, not theirs.
```

Use when: a client is happy and you want a quote that is specific and provably theirs.

You get back: a request email, four prompting questions, a consent line, and the vague reply fallback.

C6. Referral program pitch

```
Write the pitch for a referral program, to be sent to current clients.

Who we are: [AGENCY NAME], cold email for [MARKET].
The program mechanics I am willing to offer: [WHAT YOU WILL ACTUALLY GIVE, for example one month at 50 percent for a r
Who a good referral is: [TYPE, SIZE, SITUATION]
Payment route: [Stripe / invoice / other]

Give me:
1. The pitch email, 100 words, explaining the program in plain terms with the mechanics stated exactly.
2. The one paragraph that sets expectations, including when the reward is paid and what happens if the referral does n
3. A short version for a client who is already a fan and just needs the link.
4. Three ways this could go wrong, and the clause in the pitch that prevents each.

Do not overstate what the reward is worth or imply it is unusual.
```

Use when: launching referrals and you want the mechanics clear enough that nobody feels misled.

You get back: a pitch email, an expectations paragraph, a short version, and three failure modes with fixes.

C7. Onboarding welcome sequence

```
Write the onboarding sequence for a new cold email client.

Client: [CLIENT NAME], [BUSINESS TYPE]. Service: [WHAT THEY BOUGHT]. Start date: [DATE].
What we need from them: [LIST, for example domain access, a call, their target customer description, any assets]
Who their contact is: [NAME AND ROLE]
Sending platform: [Smartlead / Instantly / other]
```

```
Write three emails:
1. Sent within an hour of signing. What happens next and the one thing we need from them today.
2. Sent on day 2. The setup in progress, what we have done, what is blocked and on whom.
3. Sent on day 5. What is live, what to expect in week one, and how to reach me.

Rules:
- Each email under 120 words.
- Each has ONE job and one ask.
- No promise of results. Say what we will measure and when the first read is.
- Subject lines plain and specific.
Also give me the one thing most likely to stall onboarding, and the line in email 1 that prevents it.
```

Use when: a client signs and the first week decides whether the relationship starts clean.

You get back: three onboarding emails with one ask each, plus the stall risk and the line that prevents it.

C8. Scope creep conversation

```
A client is asking for work outside the agreed scope. Write the conversation.

Client: [CLIENT NAME]. Agreed scope: [WHAT IS IN THE CONTRACT]
What they are now asking for: [THE REQUEST]
How many times this has happened: [NUMBER]
How the request arrived: [EMAIL / CALL / SLACK]
Relationship temperature: [GOOD / STRAINED / NEW]

Give me:
1. The reply, in writing, that says yes or no clearly rather than "let me look into it".
2. Three options: include it and trade something out, do it as a paid addition with the price, or decline with the rea
3. The line that restates scope without sounding like a lawyer.
4. What to change in the next contract so this does not repeat.

Keep the tone level. No passive aggression, no apology for having a scope.
```

Use when: a request crosses the scope line and it needs answering without damaging the account.

You get back: a clear written reply, three worded options, a scope restatement, and a contract fix.

C9. Price increase conversation

```
Write the price increase conversation for an existing client.

Client: [CLIENT NAME], with us [DURATION]. Current price: [AMOUNT]. New price: [AMOUNT].
Effective date: [DATE]. Notice period in the contract: [PERIOD]
Reason: [THE REAL REASON, for example cost of the sending infrastructure, volume growth, added work]
Any value added alongside the increase: [WHAT, OR "nothing"]

Give me:
1. The email, 150 words maximum, that leads with the change, not with a long warm up.
2. The reason stated honestly, without blaming the economy or hiding behind "inflation".
3. What they get for the increase, if anything, said plainly. If nothing, tell me how to say that without dressing it
4. The two likely responses and a reply to each, including the one where they push back hard.
5. What happens if they say no, decided in advance.

No deadline pressure beyond the actual notice period.
```

Use when: prices are going up and you want the email to be direct rather than apologetic.

You get back: a 150 word email, an honest reason, two pushback replies, and the no decision made in advance.

C10. Win-back campaign

```
Build a win-back campaign for clients who left.

Former client: [CLIENT NAME], [BUSINESS TYPE]. Left: [WHEN]. Why they left, as far as I know: [REASON OR "unknown"]
What they bought: [SERVICE]. What has changed on our side since: [WHAT ACTUALLY CHANGED]
Anything notable since they left: [ANY REAL NEWS OR "nothing"]

Write three emails:
```

```
1. Day 1: no pitch, just a genuine reason to reopen the conversation, tied to what changed.
2. Day 6: the specific offer, with the price stated, if I am willing to offer one. Slot is [OFFER].
3. Day 14: the close, ending the sequence whether or not they reply.

Rules:
- Under 100 words each.
- Acknowledge why they left if I know it. Do not pretend it did not happen.
- No "we have missed you". No false urgency.
- Do not claim results we had for them or for anyone else.
Also tell me the one reason win-backs usually fail and how this sequence avoids it.
```

Use when: a former client is worth reopening and you want it to be honest about why they left.

You get back: three shorter emails ending the sequence cleanly, plus the usual failure mode and the fix.

What this pack does not do

1. It does not send anything. Every prompt produces text you review and send from your own platform. There is no sending, scheduling, or inbox management in these prompts, and nothing here checks whether a send is safe before it goes.

2. It does not verify facts. Names, observations, numbers, proofs, and reasons all arrive as bracketed slots that you fill. If you fill one with a guess, the copy will read as true and will not be. Several prompts end by asking what you must confirm before sending for exactly this reason.

3. It does not replace deliverability tooling or legal advice. The infrastructure prompts give you an ordered set of checks and the names of the tools that run them, but the results only mean something when read from your actual sending platform, your DNS, and your postmaster data. Authentication setup, list legality, and consent rules for your market need confirming with your own provider and, where relevant, a qualified advisor. These prompts help you ask better questions. They do not answer them for you.
